Read This First

The PP assembler (ppasm.exe) on the TMS320C8x Software Toolkit CD-ROM does not assemble the EALU instruction correctly in some instances. This bug has been fixed, and a new copy of the PP assembler is included on the PP Assembler floppy disk. To install the corrected version of the PP assembler, follow these steps. *If you have an update kit and have previously installed the TMS320C8x software tools*, skip to step 3.

1) On your hard disk, create a directory named *tools_dir*\mvp:

   ```
   MD C:\tools_dir\MVP ⏎
   ```

   (Note that *tools_dir* is the pathname that you provide.)

2) Insert the TMS320C8x Software Toolkit CD-ROM into the drive and copy the files to your hard drive (replace D with the name of your CD-ROM drive):

   ```
   XCOPY /S /E /V D:\*.* C:\tools_dir\MVP ⏎
   ```

3) Insert the TMS320C8x PP Assembler update disk into the floppy drive and copy the files to your hard drive (replace A with the name of your floppy drive).

   ```
   XCOPY /S /E /V A:\*.* C:\tools_dir\MVP\BIN ⏎
   ```

4) If you are installing the software tools for the first time, follow the rest of the installation instructions in the *TMS320C8x Software Tools Getting Started*.
